

FRIENDS
OF THE GLOBAL FIGHT

AGAINST AIDS,
TUBERCULOSIS
AND MALARIA

For 20 years, the Global Fund to Fight AIDS, Tuberculosis and Malaria has shown the world that AIDS, TB and malaria can and will be beaten.

74%

decline in AIDS-related death rates since 2002

42%

decline in TB death rates since 2002

47%

decline in malaria death rates since 2002

44 million lives saved

since the Global Fund partnership was founded in 2002

But the fight is far from over.

For the first time since 2002, the fight against AIDS, TB and malaria has gone backwards. However, new innovations hold huge promise.

In 2020, COVID-19 disrupted health programming in the most vulnerable populations.

Treatment Fell

About one million fewer people with TB were treated

Testing Declined

HIV testing dropped by 22%

Deaths Increased

Malaria deaths increased by 12.4% in Global Fund-eligible countries

AIDS, TB and malaria are preventable and treatable diseases that still kill more than 2.6 million people a year.

It could have been even worse, but U.S. funding allowed the Global Fund to move with speed and scale to support the COVID-19 Response Mechanism, helping countries adapt their lifesaving programs by:

Delivering malaria bednets door-to-door

Dispensing multi-month supplies of TB and HIV drugs

Using digital tools to monitor TB treatment

We can accelerate gains against AIDS, TB and malaria by delivering innovations around the world.

HIV

Long acting injectables for prevention and treatment

Malaria

New prevention and treatment approaches on the horizon

TB

Shorter-course therapy to improve access, equity and prevent drug resistant strains

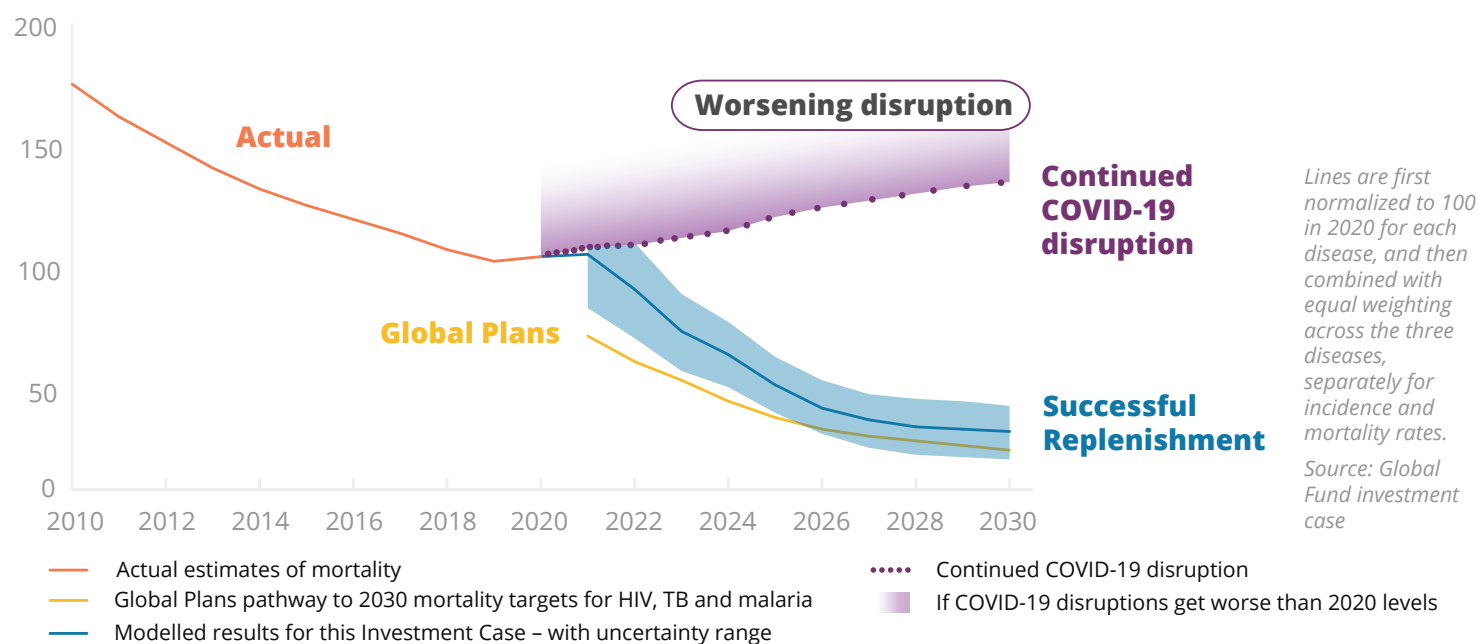

Delivery

Multi-month medicines dispensing, community delivery and tele-health

U.S. Leadership Is Critical to Get the Fight Against AIDS, TB and Malaria Back on Track.

The Global Fund has determined that \$18 billion is needed in the three year replenishment fundraising cycle to continue to scale up the technologies, health systems and community health workers that can not only fight AIDS, TB and malaria, but also prepare for future pandemics.

Combined Mortality for AIDS, TB and Malaria

\$18 billion for the Global Fund from around the world will:

Save 20 million lives between 2024 and 2026

Leverage \$59 billion in domestic investments

Avert more than 450 million infections or cases

Spur \$31 in economic returns and health gains for every \$1 invested

Reinforce systems for health and pandemic preparedness by investing approximately \$6 billion to:

Support health care workers

Strengthen labs, diagnostic tools, supply chain management, information and financial systems

Tackle antimicrobial resistance, including drug-resistant TB

Reinforce community systems

Accelerate the shift toward patient-centered, differentiated models of care

The U.S. Inspires Other Donors

15%+

During the last fundraising cycle, the U.S. commitment encouraged other donors to step up too.

35%

Despite the devastating economic impact of COVID-19, impacted communities still increased domestic resources for AIDS, TB and malaria by 35 percent.

To continue its leadership in providing a third of the Global Fund's financing

and encourage other donors to increase their investment, Friends asks for a U.S. contribution of \$2 billion a year in fiscal years 2023-2025, for a total of \$6 billion over the three-year replenishment cycle.
